

WE TREAT CATARACTS WITH EVERYTHING WE'VE GOT.

The AIO board-certified ophthalmologists focus a full complement of advanced vision treatments and state-of-the-art technology on combating vision problems. From the latest medications and non-invasive techniques to corrective surgery, advanced laser procedures and leading-edge therapies developed by the AIO clinical research team, you can expect true visionary eye care.

LenSx® Laser Surgery: This image-guided laser captures incredibly precise, high-resolution images of your eyes. These images and the data they provide are then used by our surgeons to plan and perform the bladeless procedure with exacting precision.

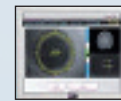

Lifestyle Lenses: Outpatient procedure enhances vision and reduces dependency on glasses. Our surgeons will help you determine which lens best fits your lifestyle and vision needs. Currently, we offer the following lifestyle lens options:

- AcrySof® IQ Toric Lens • Basic Monofocal Lens • Crystalens® Lens
- ReSTOR® Multifocal Toric Lens with ACTIVEFOCUS
- Tecnis Symphony® Lens • Trulign Toric® Lens

GoDropless Cataract Surgery: This revolutionary new treatment option offers convenience and cost-savings. Now, medication is placed in the eye during surgery, thus reducing the need and hassle of eye drops after surgery.

NEW ORA™ System with VerifEye+™: Optimal lens selection and placement, especially for patients with astigmatism and presbyopia, are key to improving visual outcomes for our patients. The ORA System ensures our surgeons have the most accurate measurements possible.

It's time to take advantage of everything we've got for keeping your vision the best it can be. Call today to schedule your appointment with one of cataract's worst enemies.

Scheduled Appointments: Make and keep them. Talk to the AIO doctor, ask questions and take part in developing a plan that is right for you.
